

How to Write Better Git Commit Messages

Begin With a Verb: Use commands like "Add", "Fix", or "Remove".

Short Subject Line: Aim for under 50 characters to keep it readable and succinct.

Skip the Period: No need for trailing punctuation in your messages.

Explain Complex Changes: If a commit requires detail, add a brief body. Separate it from the subject with a blank line.

Keep Lines Short: If using a body, wrap lines at about 72 characters.

Reference Issues: Link relevant tickets or issues in the body for context.

Stay Unified: If you're part of a team, decide on a format together and stick with it.
